

ViCARE+ Telehealth RPM System

The ViCare System is an AI-powered Virtual Care System focused on Remote Patient Monitoring (RPM). ViCare has several modules to choose from (see Diagram below) and has additional modules such as Virtual Consultations that can be added for one, easy to understand monthly price. ViCare's underlying AI technology is unique and can be updated to perform all types of processes using natural language (i.e., English), and can be easily audited and verified as trustworthy, which is a major problem with other AI technologies. ViCare's AI allows features to be easily configured and customized to meet specific requirements by various criteria such as by specialty and individual patient needs. ViCare is integrated by design and has streamlined the user workflows, has a high degree of automation, and provides value-added information to support health related decisions. The AI features can be tuned to perform the activities of a medical professional thereby saving substantial time and effort, allowing valuable medical personnel to focus on patient care and reduce administrative tasks.

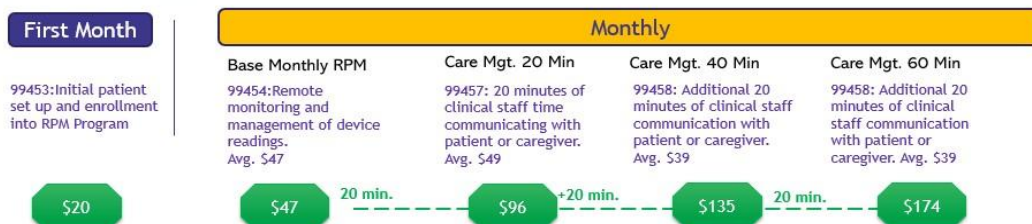

Benefits

- Provides a comprehensive telehealth solution for remote monitoring and other support functions.
- Generates additional AI assisted patient revenues and helps free up more time for patients.
- Automates tasks using time-saving AI features such as smart data alerts, work queues, and notifications.
- Supports proactive care management, diagnosis and prognosis, and higher patient satisfaction.
- Reduces the growing strain on healthcare resources and costs (75% due to chronic conditions).
- Extends the reach of providers, enables an ongoing relationship between patients and caregivers.
- Offers providers a stream of real-time health data to support quality decisions.
- Built for high security, scalability, and HIPAA compliance.

The ViCare RPM System telehealth solution pricing is competitive and based on a percentage of patient monitoring fees (Average of \$2,000/patient/year) per the Revenue Model that can be billed to Payers.

RPM Revenue Model

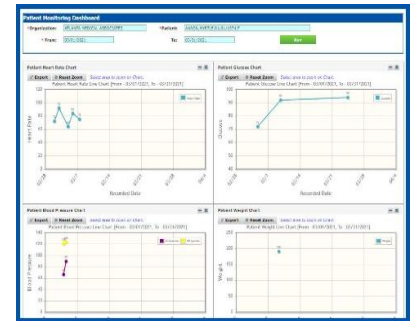

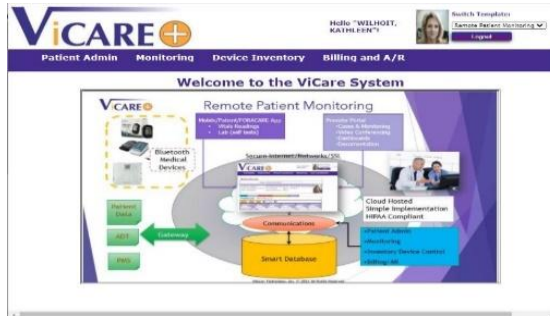

Telehealth is covered by Medicare and many other payers, therefore ViCare supports the processing and reporting needed for billing and reimbursement. The revenue model for Remote Patient Monitoring (RPM) is shown in the chart below.

The RPM revenue model provides the physician an estimated \$2000 a year per patient on average, for about 1 hour per month, per patient. The estimated number of participating patients per physician is 80, which equates to an estimated \$160,000 additional annual revenue per physician.

The ViCare RPM System serves patients and doctors and other healthcare professionals. The ViCare RPM System is a software-as-a-service (SaaS) solution for supporting Telehealth RPM. The ViCare RPM System's value and advantage stems from its useability, flexibility, and accuracy based on advanced system configuration capabilities that include edits and workflows by discrete data such as diagnosis, and automated alerts to reduce manual work, improve accuracy and responsiveness, and reporting.

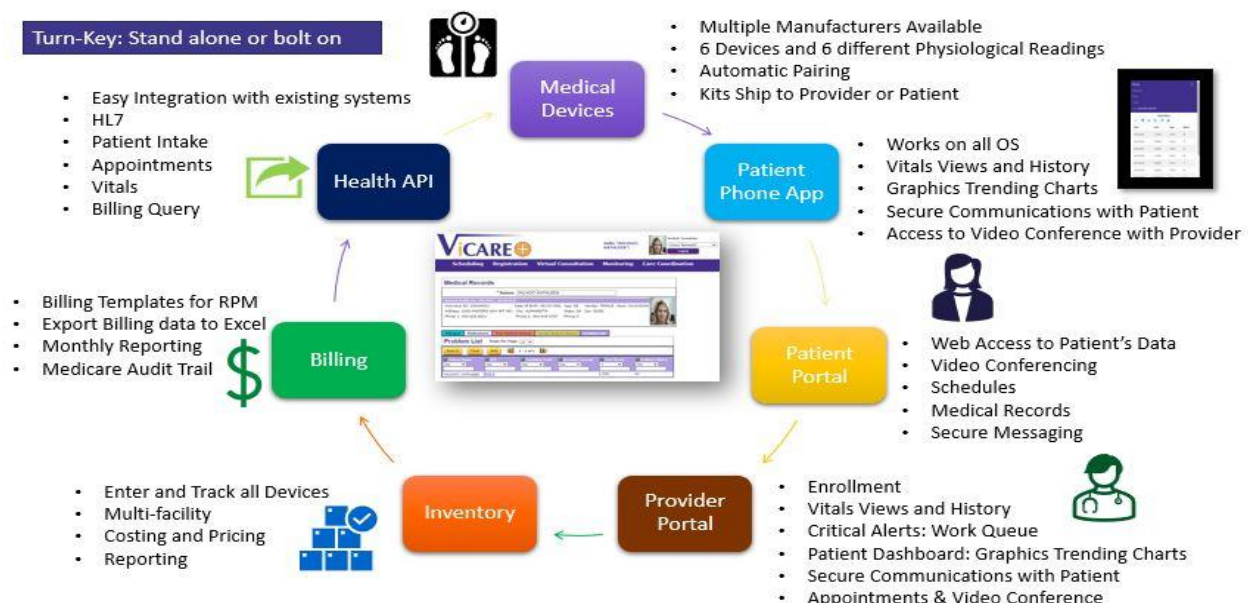

Date	Time	Type	Result
20210402	11:38:00	PLSOX	89
20210420	12:08:00	PULSA	75
20210420	12:08:00	PLSOX	96
20210304	11:38:00	PULSA	80
20210304	10:06:00	PULSA	72
20210304	10:06:00	PLSOX	96
20210303	12:00:00	HR	101
20210303	03:27:00	PULSA	83
20210303	03:27:00	PLSOX	96

The ViCare RPM System coordinates the healthcare patient's medical data and the provider's application and results. In addition to the applications in the menus above, the ViCare System has portals and administrative applications for support, which have secure access by user roles. ViCare records a full range of physiological readings, vitals and test results: Blood Pressure, Heart Rate, Pulse Oxygen, Blood Glucose, Weight and Weight variance with BMI. Combining these with rosters creates abilities for multi-specialties and specific medical data you want to monitor. ViCare also has excellent documentation and reporting and provides documentation of alerts, triggers, interventions and communications in one easy form. The documentation provides proper audit trail for Medicare and other Payers.

ViCare offers so much more than just minimal Vitals Functionality offered by others with its more comprehensive, time-saving features for the delivering the best RPM solution.

Integrated, Time Saving Features

Modules

- Choose one or more of many modules and hundreds of features and implement them as needed
- Integrated System foundation with AI, comprehensive Healthcare Database, Security, etc.
- Connect to other systems through application program interface (API)
- Use built-in AI Enterprise Solution (see below) to add other robust features or new functionality

Conclusion

ViCare has the only AI System that can provides several integrated modules to choose from and assists, automates, and supports better decisions and goes beyond searches, document management and other content management and can easily build and manage any enterprise multiple-function, trustworthy application to produce superior results, benefits, and return on investments (ROI).

In addition, ViCare's AI System has an advantage with being able to use requirements specified in user friendly English to automatically build enterprise-grade, multi-function applications to help achieve success using AI to enhance current systems and company processes and activities.
